

Piecewise and Step Functions

1. What makes a piecewise function different from other functions?
2. Give an example where a piecewise function describes a real-world situation better than a function with a single equation.
3. What is a step function? How is different from other piecewise functions?

Graph the following step functions:

$$1. f(x) = \begin{cases} 2, & \text{if } x < -3 \\ 4, & \text{if } x \geq -3 \end{cases}$$

$$2. g(x) = \begin{cases} 1, & \text{if } x < -2 \\ 3, & \text{if } -2 \leq x < 4 \\ 5, & \text{if } 4 \leq x \end{cases}$$

$$3. h(x) = \begin{cases} 4, & \text{if } x \leq -2 \\ 3, & \text{if } -2 < x \leq -1 \\ 2, & \text{if } -1 < x \leq 0 \\ 1, & \text{if } 0 < x \end{cases}$$

$$4. p(x) = \begin{cases} 0, & \text{if } (-\infty, 1] \\ -2, & \text{if } (1, +\infty) \end{cases}$$

$$5. q(x) = \begin{cases} -5, & \text{if } (-\infty, -4) \\ 3, & \text{if } [-4, 1) \\ 7, & \text{if } [1, +\infty) \end{cases}$$

$$6. q(x) = \begin{cases} 2, & \text{if } (-\infty, 3] \\ 4, & \text{if } (3, 6] \\ 6, & \text{if } (6, +\infty) \end{cases}$$

Exercise 19

Write a function to represent each graph.
